

optimization of care

Bethany Children's Health Center offers comprehensive rehabilitative therapies and 24 hour medical care.

The short-term evaluation program offers a comprehensive approach designed to optimize care needs for children living at home. This inpatient program is designed for children who have complex medical needs as a consequence of birth defects and/or complications, traumatic accidents, or significant illnesses. During admission to the Hospital, children receive a variety of services and evaluations individualized for each patient.

Assisting families with their challenges and questions is a significant part of our work. Parents are considered an essential part of the treatment team.

Our goal for patients at Bethany Children's Health Center is for them to return to a safe and loving environment with proper equipment, knowledge and resources identified to maximize the potential of each child.
